Contents

Chapter 1	
Setup instructions	1
Hardware requirements	2
Software requirements	2
Course materials for students	3
Setting up student workstations	3
Setting options in e.Report Designer Professional	3
Configuring an ODBC data source	11
Verifying access to the Sfdata sample database	14
Setting a display appearance option in Microsoft Windows	14
Creating a user and a home folder using Actuate Management Console	15
Chapter 2	
Course introduction	21
Working with Actuate e.Report Designer Professional, Part 1	22
About this course	22
Prerequisites	22
Course objectives	23
What you learn	23
Course agenda – day 1	24
Course agenda – day 2	25
Actuate course curriculum	26
Working with Actuate e.Report Designer Professional	26
Developing Customized Reports	27
Designing and Publishing e.Spreadsheet Reports	27
Working with Formula One e.Report Designer	27
Actuate course curriculum (continued)	28
Managing Actuate iServer System	28
Creating an e.Reporting Web Site using Actuate ReportCast	28
Customizing Actuate Active Portal for JSP	28
Customizing Actuate Active Portal for .NET	29
Actuate Information Delivery API Workshop	29
Integrating and Deploying Formula One e.Report Engine	29
Supporting information	30
Chapter 3	
Actuate and ReportingEngines product overview	31
Actuate and ReportingEngines product overview	32
About Actuate products and their business benefits	33
About Actuate and ReportingEngines	33
Providing business benefits	34
About Actuate reporting solutions	35
Designing reports for your enterprise	35
Managing reports in your enterprise	35
Viewing and distributing reports across your enterprise	36
Benchmarking and improving reporting performance	37
About Actuate 8 products	38
About Actuate design tools	39
About e.Report Designer Professional	39
About e.Report Designer	39

About e.Spreadsheet Designer	39
About Formula One e.Report Designer	40
About Actuate Information Object Designer	40
About Actuate Analytics Cube Designer.	40
Providing report input	41
Data sources accessible to all report design tools	41
Data sources accessible to some report design tools	41
Providing report output.	42
About Actuate Basic reporting with e.Report Designer Professional	43
Supporting intelligent report navigation.	43
Developing a report using object-oriented technology.	43
About Actuate iServer and Actuate management tools	45
About Actuate iServer	45
About Actuate Management Console	45
About Actuate Active Portal	45
About Actuate iServer Options	46
About Actuate viewing tools	48
About Actuate Active Portal	48
About Actuate Management Console	48
About End User Desktop	48
About Actuate Viewer for viewing older reports	48
About Actuate analysis tools	49
About Actuate e.Analysis Option.	49
About Actuate Analytics Option	49
Customizing and extending Actuate	50
Customizing and extending e.Report Designer Professional	50
Extending e.Spreadsheet	51
Extending Formula One	51
Extending Actuate iServer.	51
About customizing and extending Actuate Active Portal	52
Working with an Actuate Basic report on the web	53
Analyzing data in an Actuate Basic report	59
Summary	61
Chapter 4	
Introducing reporting concepts	63
Introducing reporting concepts	64
Overview	65
About e.Report Designer Professional	65
What you learn	65
Key terms	66
Supporting information	66
Understanding report development tasks	67
Planning the report.	67
Accessing data from one or more data sources	68
Structuring report content	69
Laying out the report.	69
Formatting the content.	69
Controlling access to report data	69
Previewing and distributing the report	69
Building a report from components	70
About the types of components	70
Using components to implement the Actuate Foundation Classes	70
About Actuate file types for report design	72

About report object design (.rod) files	72
About report object library (.rol) files.	72
About Actuate Basic source (.bas) files	72
About Actuate file types for report generation and viewing	73
About report object executable (.rox) files	73
About report object value (.rov) files	73
About report object instance (.roi) files.	73
Understanding the report object life cycle.	74
About the Actuate web reporting architecture	75
Publishing a report to an Encyclopedia volume.	75
Using Actuate Management Console.	76
Using Actuate Active Portal	76
Connecting to a database or data warehouse	77
Working with connections	77
Using an ODBC data source.	77
About databases and queries	78
Understanding the database schema	78
Creating a SQL query	78
About joins	79
Exercise 1	80
Drafting a report design.	81
Create your design here	83
Summary	84

Chapter 5

Understanding report development tools85

Understanding report development tools.	86
Overview	87
About the report development environment	87
What you learn	87
Supporting information	87
Working in the report development environment	88
About menus	88
About toolbars	89
About the work area	89
About the status bar	89
Docking, undocking, opening, and closing windows	89
About the perspectives	91
About the design perspective.	92
Understanding design perspective tools	93
Creating a report structure.	93
Using the Properties window	93
Using the Toolbox.	94
About structure components.	95
About data components	95
About controls	95
About drawing and graphical components.	95
About page components	95
Understanding the Layout window	97
About the data perspective	98
About Query Editor	98
Synchronizing a query	99
Using a column alias in a query	100
About Textual Query Editor.	100

Modifying data row variable properties101
Clearing a query using Textual Query Editor101
Sorting data in a query using Textual Query Editor101
About the view perspective.102
About the debug perspective.104
Starting a report design105
About Quick Report Wizard.105
About Listing Report Wizard105
About Blank Report106
Creating a report using Quick Report Wizard107
Using Page Setup112
Setting the paper size.113
Selecting page orientation113
Setting margins113
Summary114
Chapter 6	
Creating a grouped report117
Creating a grouped report118
Overview119
About grouped reports.119
What you learn119
Key terms119
Supporting information120
Understanding grouped reports121
Understanding the structure of a grouped report122
Performing a calculation in a report124
About nested groups125
Creating a grouped report126
Using the Listing Report Wizard126
Using the Sorting and Grouping dialog126
Adding a group section component127
Creating a group section128
Exercise 2129
Creating a grouped report without using a report wizard130
Exercise 3158
Creating a grouped report using the Listing Report Wizard159
Modifying a grouped report173
Using GroupOn and GroupInterval179
About GroupOn179
About GroupInterval.180
Exercise 4181
Grouping data by interval (optional)182
About table of contents properties192
About TocAddComponent193
About TocAddContents193
About TocValueExp193
Configuring and testing the table of contents195
Summary199
Chapter 7	
Creating a report that uses parameters201
Creating a report that uses parameters202

Overview	203
About report parameters	203
What you learn	203
Key terms	203
Supporting information	204
Displaying parameters in a SQL query	205
Adding parameters to a query	205
About simple parameters	205
About ad hoc parameters	205
Setting parameter display properties	207
About general parameter properties	208
About advanced parameter properties	209
Using a report object values (.rov) file	210
Using an ROV on the desktop	210
Using an ROV on Actuate iServer	211
Exercise 5	212
Creating simple and ad hoc parameters using Query Editor	213
Exercise 6	231
Publishing and previewing a report on Actuate iServer	232
Exercise 7	238
Creating a report object values file (optional)	239
Summary	249
Chapter 8	
Review exercise – day 1	251
Review exercise – day 1	252
Creating a grouped report	253
Chapter 9	
Creating a crosstab report	255
Creating a crosstab report	256
Overview	257
About crosstab reports	257
What you learn	258
Key terms	258
Supporting information	258
Recognizing the parts of a crosstab report	259
Exercise 9	260
Creating a crosstab report	261
Summary	270
Chapter 10	
Working with parallel and sequential sections	271
Working with parallel and sequential sections	272
Overview	273
About parallel and sequential sections	273
What you learn	273
Key terms	273
Supporting information	274
Understanding parallel sections	275
Examining a parallel section	276
Exercise 10	277
Creating a report using a parallel section	278

Understanding sequential sections286
Examining a sequential section.287
Exercise 11289
Creating a report using a sequential section290
Summary295

Chapter 11

Working with a dynamic text control297

Working with a dynamic text control298
Overview299
About dynamic text controls299
What you learn299
Supporting information300
Examining formatted text in a dynamic text control.301
Comparing a text control and a dynamic text control302
Understanding dynamic text control features305
Understanding support for data in plain text, HTML, and RTF formats.305
Understanding dynamic resizing.305
Understanding consistent output generation306
Understanding properties for optimizing output.306
Understanding default control size and position.307
Adjusting default dynamic text control behavior308
About default dynamic text control behavior308
Changing default sizing behavior308
Controlling movement of other controls.308
Changing control expansion behavior309
Adjusting control positioning behavior309
Controlling how a frame splits across pages.309
Understanding VerticalPosition values310
Understanding VerticalSize values.311
Understanding font requirements312
Using font information to generate text in a dynamic text control312
Looking for font information in multiple sources.312
Embedding font information in the report object executable file313
About font installation requirements for users313
Examining a report that uses a dynamic text control314
Exercise 12318
Modifying a report to use a dynamic text control319
Using a dynamic text control in a nested frame324
Using a nested frame.324
Processing a control in a nested frame324
Exercise 13326
Resolving output display issues327
Summary333

Chapter 12

Creating a chart335

Creating a chart336
Overview337
About charts.337
Key terms338
Supporting information338
Understanding chart types339

Recognizing the parts of a chart	341
Setting the properties of a chart control	343
About Chart Builder	344
Selecting a chart type	345
About overlay and study charts	346
Adding an overlay or study chart.	346
About the overlay chart.	346
About the study chart.	347
Obtaining data for a chart.	348
Selecting data	348
Selecting data for the value axis	349
Selecting data for the categories and series	349
Plotting empty values	350
Formatting a chart	351
Formatting a title	351
Working with a legend	352
Formatting additional chart properties.	352
Formatting a chart's axes	352
Adding data values to data points.	353
Creating a hyperlink from a chart	353
Formatting sample data.	353
Exercise 14	354
Creating a stock chart	355
Sorting and grouping chart data	364
Managing missing data	365
Adding categories and series	365
Summary	372
Chapter 13	
Creating a hyperlink	375
Creating a hyperlink.	376
Overview	377
About hyperlinks	377
What you learn	377
Key terms	378
Supporting information	378
Writing a link expression	379
Defining a hyperlink	379
Understanding URL syntax	380
Understanding search expression syntax	380
Understanding dynamic report parameter syntax	382
Adding a data value to a link expression	383
Exercise 15	384
Creating a hyperlink within a report	385
Exercise 16	391
Creating a hyperlink to an external report	392
Creating a hyperlink from a chart	399
About hypercharts	399
Creating a hyperchart URL	399
Exercise 17	401
Creating a hyperchart	402
Exercise 18	413
Creating a dynamic hyperlink (optional)	414
Summary	420

Chapter 14	
Using conditional formatting	.423
Using conditional formatting	.424
Overview	.425
About conditional formatting	.425
What you learn	.426
Supporting information	.426
Modifying a method to set conditional formatting	.427
About Actuate Basic methods	.427
About the OnRow() method	.427
About the Finish() method	.427
About component inheritance	.428
Understanding how a component inherits behavior or properties	.428
Inheriting from a superclass	.428
Exercise 19	.430
Conditionally formatting a component	.431
Summary	.436
Chapter 15	
Review exercise – day 2	.437
Review exercise – day 2	.438
Creating a sequential report	.439
Index	.441
Quiz answers	.473

Actuate

*Working with
Actuate e.Report Designer Professional

Customizing and extending e.Report Designer Professional	52
Extending e.Spreadsheet	53
Extending Formula One	53
Extending Actuate iServer.	53
About customizing and extending Actuate Active Portal	54
Working with an Actuate Basic report on the web	55
Analyzing data in an Actuate Basic report	61
Summary	63
Chapter 19	
Understanding programming basics	65
Understanding programming basics	66
Overview	67
About programming basics	67
What you learn	67
Key terms	67
Supporting information	68
Working with programming tools	69
About the Properties window.	69
Using the Properties page	69
Using the Methods page	69
Using the Variables page	70
Using the Class page	70
Using Library Organizer.	70
Understanding Actuate Basic.	71
About Actuate Basic	71
Comparing Actuate Basic to Visual Basic	71

Contrasting Actuate Basic with Visual Basic.	72
About Actuate Basic fundamentals	73
Working with variables	73
Creating and calling procedures	73
Coding conditional tests	73
Coding loops	73
Working with variables	74
About data types	74
Defining a variable	74
Defining a variable.	75
About Dim.	75
Understanding Dim syntax	75
Reviewing examples	76
Defining a global variable or constant.	77
About global variables and constants	77
Understanding global variable or constant definition syntax	77
Using Declare...End Declare to define a variable and a constant	78
Defining a custom data type	79
About custom data types	79
Understanding custom data type definition syntax	79
Using Declare...End Declare to define a custom data type	80
Creating a procedure	81
About functions and subroutines	81
Understanding procedure syntax	81
Reviewing an example	82
Calling a procedure	83
About calling a procedure	83
About the called function	83
Exercise 20	84
Working with variables	85
How to create a method.	85
How to call a method	87
Working with classes	90
About classes	90
About objects	90
About transient objects	90
About persistent objects	90
About class variables.	91
About instance variables	91
About static variables	91
Working with an object	92
Creating and destroying an object	92
Understanding the state of an object	92
Understanding the behavior of an object.	92
Accessing an object	93
Using an object reference variable	93
Understanding Set syntax	93
Reviewing an example	94
Using Factory to get a reference to a control.	94
Accessing an object's methods and variables	96
About dot notation	96
Understanding dot notation syntax.	96
Reviewing examples	96
Understanding class scope	98

About the scope resolution operator	98
Using the Project window	99
Using the Class page	99
Using the fully scoped class name	100
Using static class variables.	100
Accessing variables with generic code	101
About GetValue and SetValue	101
Understanding GetValue function syntax	101
Reviewing an example	102
Exercise 21	103
Working with objects and class variables	104
Using a simple conditional test.	106
About If...Then...Else	106
Understanding If...Then...Else syntax	106
Coding a simple conditional test	108
Using a parallel conditional test	109
About Select Case.	109
Understanding Select Case syntax	109
Coding a parallel conditional test	111
Exercise 22	112
Coding a conditional test	113
Calling a function	113
Constructing conditional statements	115
Coding a simple loop	118
About Do...Loop	118
Understanding Do...Loop syntax.	118
Reviewing an example	119
Coding a loop with start and end conditions	120
About For...Next loop	120
Understanding For...Next loop syntax.	120
Reviewing an example	121
Exercise 23	122
Coding a loop (optional)	123
Using Do...Loop to control loops.	123
Using For...Next to control program loops	128
Summary	133
Chapter 20	
Working with commonly used AFC methods	135
Working with commonly used AFC methods	136
Overview	137
About AFC methods	137
What you learn	138
Supporting information	138
Building a content object	139
Understanding common protocol for content objects	139
Understanding object creation	139
Understanding the method call sequence for a persistent content object	140
Building a data source object	141
About building a data source object	141
Understanding the method call sequence for building a data source object	141
Understanding common programming tasks	142
Understanding general component handling.	144
About general component handling	144

Declaring a global variable	144
Formatting a control	145
Customizing data access	146
Accessing a custom data source	146
Filtering data rows	146
Manipulating columns	147
Understanding custom data source access	148
About accessing a custom data source	148
Overriding the Start() method	148
Overriding the Finish() method	149
Retrieving records from a custom data source	150
About retrieving records from a custom data source	150
Examining a Fetch() method override	151
Exercise 24	152
Retrieving data from a flat file	153
Manipulating variables and columns	160
About manipulating variables and columns	160
Overriding AFC methods	160
Examining a Fetch() method override	161
Examining an OnRead() method override	161
Exercise 25	162
Generating a data row variable.	163
Exercise 26	167
Generating a data row variable by overriding OnRead()	168
Formatting data	175
About formatting data	175
Changing a control's format	175
Changing a control's value	175
Adding a control	176
Deleting a control	176
Referencing a control	176
Working with page layout	177
About page layout	177
Building a custom frame	177
Building content for a Before or After slot	178
Building a page header or footer	178
Exercise 27 (optional)	179
Using custom frames (optional)	180
Reviewing the commonly used methods	188
Summary	189
Chapter 21	
Using components in component libraries.	191
Using components in component libraries	192
Overview	193
About components and component libraries	193
What you learn	193
Key terms	194
Supporting information	194
Understanding component libraries	195
Using a component library in a report design	197
Understanding included and available libraries	197
About Library Organizer.	197
Exercise 28	198

Creating and including a component library199
Understanding inheritance204
Understanding how a component inherits behavior or properties204
Inheriting from a reference204
Inheriting from a superclass205
Exercise 29206
Creating a reference to a library component207
Creating a subclass.210
Exercise 30213
Creating a component by subclassing214
Copying a component.218
Exercise 31220
Creating a component dynamically221
Exercise 32224
Examining inheritance225
Summary228

Chapter 22

Debugging a report231

Debugging a report232
Overview233
About debugging an Actuate report design233
What you learn233
Supporting information234
About the types of report errors235
About compilation errors235
About run-time errors235
About logic errors235
Detecting a compilation error236
Understanding debugging tools237
Monitoring report generation238
Examining variable values239
About Variables Browser.239
About Watch240
Viewing the stack of method calls241
Displaying a message from a report242
Using MsgBox.242
Using ShowFactoryStatus243
Exercise 33244
Using the debugging tools245
Exercise 34250
Creating a debugging log (optional).251
Summary254

Chapter 23

Designing a report that uses page-level security.255

Designing a report that uses page-level security256
Overview257
About page-level security257
What you learn257
Key terms258
Supporting information258

Understanding page-level security	259
Understanding the developer's role	259
About the Factory service	259
Understanding report viewing and printing	259
Understanding the Report Server Security Extension	260
About the Report Server Security Extension.	260
About the levels of Encyclopedia volume security the RSSE controls	260
Setting up page-level security	261
Using the GrantExp property	261
Creating an Actuate Basic expression	261
Coding an Actuate Basic function	262
Overriding SetSecurity	262
Understanding page numbering	263
Using the page number control	263
Calling AFC methods to return page numbers and page counts	264
Implementing page-level security	265
Understanding software prerequisites	265
Designing a report that uses page-level security	265
Assigning Encyclopedia volume privileges	266
Exercise 35	267
Building a report that uses page-level security	268
Inheriting page-level security.	280
Overriding the page-level security inheritance rule	281
Setting CascadeSecurity to False	281
Overriding GetFullACL()	281
Creating a virtual security ID.	283
About virtual security IDs	283
Creating a virtual security ID	283
Summary	284

Chapter 24

Designing a browser scripting control287

Designing a browser scripting control.	288
Overview	289
About browser scripting controls	289
What you learn	289
Supporting information	290
Using a browser scripting control	291
Understanding browser scripting control behavior	292
Understanding browser scripting control inheritance	292
Understanding browser scripting control properties	292
Performing common tasks	293
About commonly used methods	293
Writing static browser code	294
Generating dynamic browser code	294
Controlling clipping	294
Using the client viewer or printing the report	294
Understanding other uses of browser code	295
Writing global custom browser code	295
Using a frame as an HTML form	295
Modifying a control for an alternative viewing environment.	296
About viewing environments	296
Changing browser scripting control appearance	296

About commonly used functions297
Working with a browser scripting control library298
About browser scripting control libraries298
About BSC_Library_Common.rol298
Exercise 36299
Using a browser scripting control from a library300
Summary314

Chapter 25

Designing an Actuate report for XML output317
Designing an Actuate report for XML output318
Overview319
About integrating Actuate Basic reports319
What you learn319
Key term319
Supporting information319
Understanding XML structure320
About XML320
Mapping a report component to an XML element or attribute321
Understanding XML Data properties322
Interpreting an XML output file324
Exercise 37325
Designing a report for XML output (optional)326
Summary333

Chapter 26

Creating an information object335
Creating an information object336
Overview337
About information objects337
What you learn337
Key terms337
Supporting information338
Developing an information object339
Generating query output340
Designing an information object341
Understanding query output343
Modifying query output344
Using Data Row Editor345
Using Column Editor345
Modifying an information object's output fonts347
Exercise 38348
Creating an information object349
Setting customization options360
Specifying the query output format361
Exercise 39362
Customizing the query in an information object363
Summary375

Chapter 27

Managing design and run-time resources377
Managing design and run-time resources378

Overview	379
About configuration files	379
What you learn	380
Supporting information	380
Selecting a configuration file for a report	381
About configuration file structure	382
Understanding configuration file elements	382
About the SearchPath element	384
About the Include element.	384
About the Design element	385
About the Runtime element	385
Including a component or function library	386
Setting connections for report design and report generation	388
About connections	388
Specifying a connection for report design	388
Specifying a connection from a library	389
Setting a default design connection	390
Defining connection properties	390
Specifying a connection for report generation.	390
Migrating a report from one environment to another	392
Specifying a template	393
Exercise 40	394
Creating and modifying a configuration file	395
Summary	399
Index	401
Quiz answers	435
